## **REASONS FOR ALLOWANCE**

Applicant's submission filed on January 5, 2009 has been entered as compliant. Claims 25 and 26 have been cancelled and claims 4, 17, 19, 21-24 are pending and allowed in the current application.

### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

Methods of oxygenation of yeast slurry have been known in the art. Quain et al., of record provide a method of brewing beer in which they aerate yeast from previous fermentation. Quain teaches "oxygen (alone or as part of a gaseous mixture) is introduced into an aqueous suspension of yeast, the oxygen content of the suspension is monitored, and the rate at which oxygen is introduced is increased in such a manner as to maintain the concentration of oxygen in the suspension substantially constant, oxygenation continuing at least until such time as there is no longer any need to increase the rate of introduction of oxygen to maintain the same concentration of oxygen in the suspension" and also teaches maintain the concentration of oxygen in the suspension as substantially constant. In Quain, "brewers' yeast is treated with oxygen until the rate at which it takes up oxygen reaches or at least closely approaches a maximum in the prevailing conditions." Applicant's response to Quain's liquor being brewers word for water has been found convincing and thus there is no disclosure or motivation to add an adjunct to the aerating yeast has been provided by Quain. Quain does not teach aeration of yeast in a wort free medium in the presence of liquid adjunct comprising cereal sugars and zinc, wherein the gas comprising oxygen is delivered above the maximum oxygen uptake rate of the yeast wherein the period of time is 8 hours up to about 21 hours as instantly claimed.

Art Unit: 1794

Other close prior art Seebeck teaches of wine making and aerating yeast in grape juice in a continuous fermentation process. Lindberg teaches of addition of zinc however, none of references either alone or in combination provides specific suggestion or motivation to show a method of aeration of yeast slurry in a wort free medium with liquid adjunct comprising cereal sugars and zinc. The references also do not teach a process of enhancing the yeast fermentation of wort by oxygenation of yeast by a gas comprising oxygen, which is delivered above the maximum oxygen uptake rate of the yeast wherein the period of time is 8 hours up to about 21 hours as instantly claimed to oxygenate the yeast slurry in order to enhance the yeast fermentation of wort, as is instantly claimed. Thus, a method of enhancing wort fermentation by oxygenation of yeast slurry by the method recited in the instantly claimed invention was not known at the time of the invention and is free of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
